Before Photoshop In the pre-Photoshop era, hand-drawing was the most common tool used to create an image. Infantile cerebral paralysis of Japan (ICPJ) in Japan. Infantile cerebral paralysis of Japan (ICPJ) is now recognized as a distinct entity among cerebral palsy. In the Western world the incidence of ICPJ is the same as that of spastic cerebral palsy. Only a few studies have been reported from Japan on ICPJ, with different results. In this study, we systematically investigated the clinical features, etiology and prognosis of ICPJ in Japan. The clinical records of 18 patients with ICPJ were reviewed. Genetic studies of the HPRT gene were done on the patients and their parents. The mean age of onset of a gait disturbance was 7.8 months. The locomotion disturbance and its severity were most prominent in the axial muscle groups, followed by the proximal muscle groups. Only two patients showed a head turn. The most striking clinical feature was a lack of a massa intermedia in ICPJ patients. Unlike in spastic cerebral palsy, ICPJ patients showed no predominance of either motor or sensory abnormalities. Although the clinical manifestation of ICPJ is similar to spastic cerebral palsy, some differences are suggested in the etiology, the localization of the lesions and the prognosis of the patients. If the internal spin states of a pair of fermions are entangled, then the measurement performed on them cannot be described by a product of the individual state of each fermion. The measurement performed by the detectors on the fermions outside the reservoir must also change the fermion's internal states, and the state of the reservoir itself should be entangled with the internal states of the particles. The presence of entanglement in the spin state of the reservoir allows it to become a source of spin entanglement between the two reservoirs. In this situation, as we assume, the reservoirs are initially in a spin singlet state. With this, we find that there is entanglement between the reservoir and the qubits. In this case, the entanglement between the two reservoirs does not violate the Bell inequality by its own as it is an entanglement between the reservoirs and the two qubits. As expected from quantum mechanics, this entanglement does not violate the Bell inequality because the detectors do not measure the particles. The authors would like to thank FAPESP (Center for Quantum Information, Brazilian Ministry of Science and Technology) for financial support and Max-Planck-Inst

Pages Sunday, December 28, 2013 Finishing a quilt top My Christmas lunch was very fast and easy as I just made a few sandwiches and baked some fruit and veg. I spent most of my Christmas break finishing two quilts that I was making. One is a Christmas present for my sister and one is my Christmas present for myself. I'm a little proud of myself as this quilt top has been finished for almost a month now. I finally felt that I had the whole top cut and would be able to put the layers together. The 'Banner' quilt It's an eclectic mix of fabrics and I think it's going to be great. I knew that I wanted to put a brown and orange section, so there were a few choices but then I had to work out how I would top it. The best was a simple, bold pieced border that tied into the main portion and helped keep the spaces of the colourway together, but I like the look of the applique stitched border that I have chosen. This photo is a bit blurry and I'm not sure why but it's taken using my phone. I think I'd better carry on and finish assembling the quilt tops and then take some better pics. The only problem with the song is I think it doesn't progress well. You could've added more music or whatever just to make it more interesting. You could've presented the story as a whole, instead of splitting it into two parts. It's hard to keep my attention because the first half is kinda boring and the second half is kinda a letdown. The second thing is the animation. It could've been so much more interesting. I guess you gave up? The song is fine, but I think it's kinda disappointing to see a perfectly good song with cute animation go for nothing.
